

Stay safe while enjoying the smaller 200-350 gram multi-shot fireworks.

Many of the smaller multi-shot cakes pack an impressive punch for their size. With their power and smaller base, they may tip over and continue firing if you do not take preventative measures. We recommend securing each 200-350 gram multi-shot cake by one of the following methods:

Drive a stake into the ground, then secure the firework to the stake using tape, as shown.

Place bricks or cinder blocks around the cake, securing it into place. Make sure you leave the fuse exposed to ensure easy lighting.

Tape the sides of the cakes down to a sturdy piece of plywood.
